eHealth in caring for people with multimorbidity in European countries

Francesco Barbabella (INRCA, Linnaeus University)

on behalf of the ICARE4EU consortium

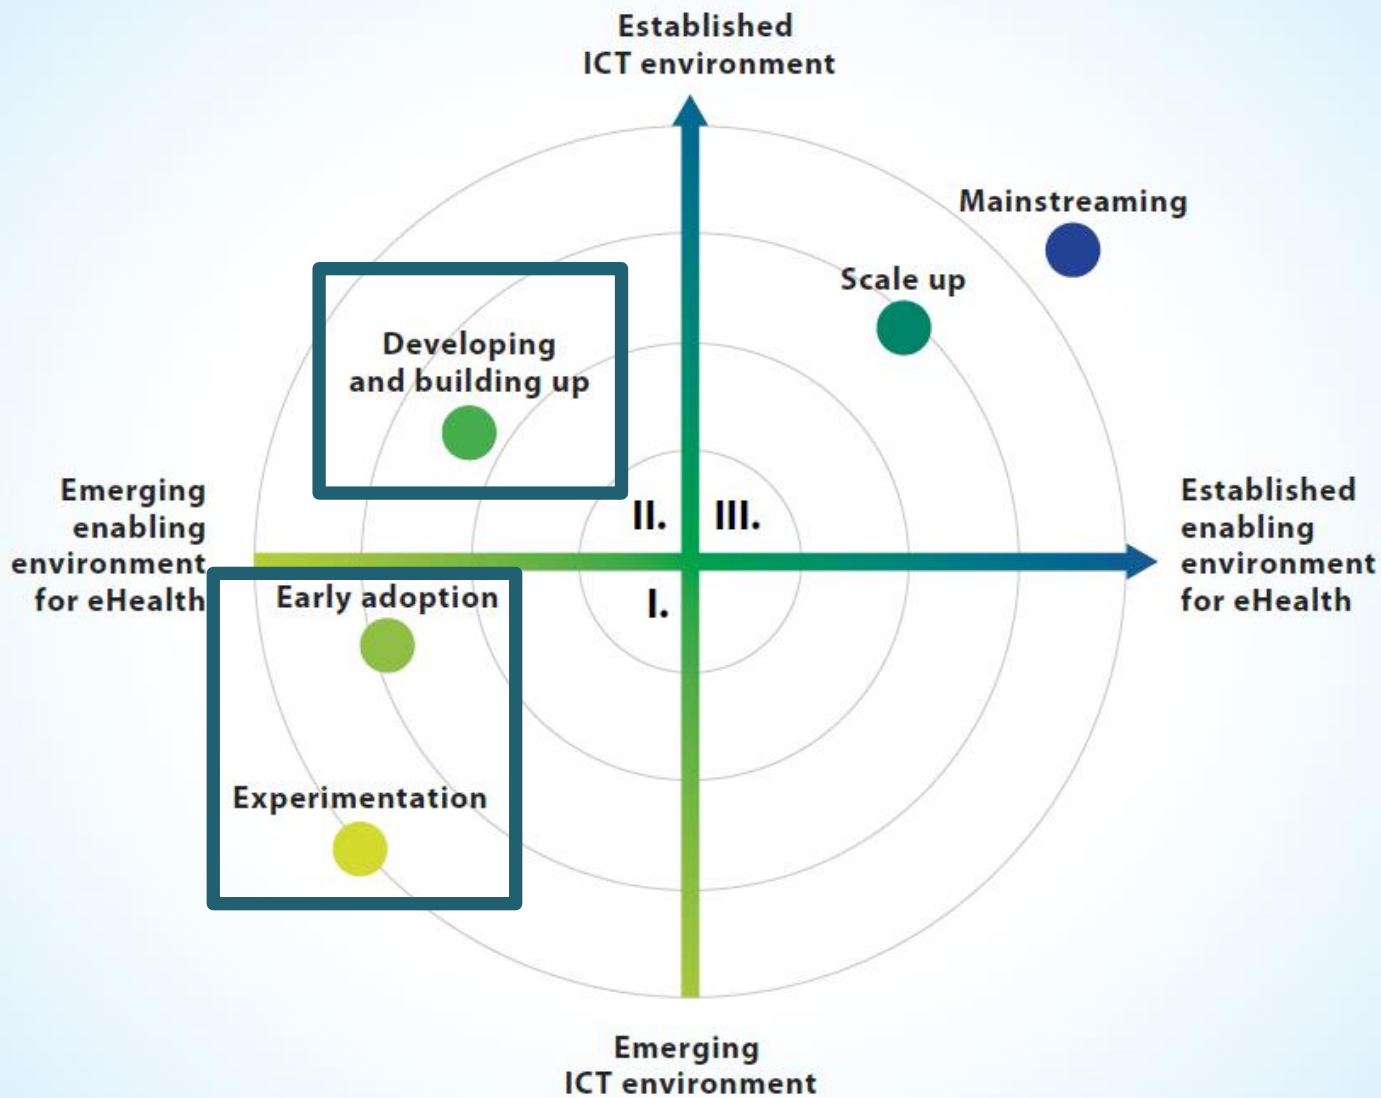

Policy Issue

New opportunities enabled by the application and exploitation of **information and communication technologies** (ICTs) in the healthcare sector could substantially improve **patient-centeredness** and **care integration** for people with multimorbidity.

eHealth solutions can play a major role in **enhancing care practices** and creating **new services** for people with multimorbidity.

However, current **implementation** of health services for people with multimorbidity rarely exploit the full potential of ICTs.

WHO & ITU (2012)

Definition of eHealth

The use of ICTs in health products, services and processes combined with organisational change in healthcare systems and new skills, in order to improve health of citizens, efficiency and productivity in healthcare delivery, and the economic and social value of health.

European Commission, 2013

If Mr. Johnson had...

eHealth domains and benefits

	Benefits for users
Information, Education and Training	<ul style="list-style-type: none">• <i>Self-empowerment</i>• <i>Health promotion</i>• <i>Trained workforce</i>
Active and Assisted Living	<ul style="list-style-type: none">• <i>Independence and self-care</i>• <i>Relief for family carers</i>• <i>Workload for professionals</i>
Remote Consultation, Monitoring and Care	<ul style="list-style-type: none">• <i>Access and quality of care</i>• <i>Relief for family carers</i>• <i>Workload for professionals</i>
Health Information Systems and Digital Communication	<ul style="list-style-type: none">• <i>Continuity and integration of care</i>• <i>Health data management</i>
Decision Support and Population Stratification Systems	<ul style="list-style-type: none">• <i>Continuity of care</i>• <i>Health data analysis</i>• <i>Proactive interventions</i>

Innovative care programmes in Europe: benefits from adopting eHealth solutions

- **Improving access to healthcare services**
- **Enhancing care coordination and integration**
- **Enabling self-management**
- **Supporting decision making of clinicians**
- **Enabling monitoring, risk analysis and proactive intervention**

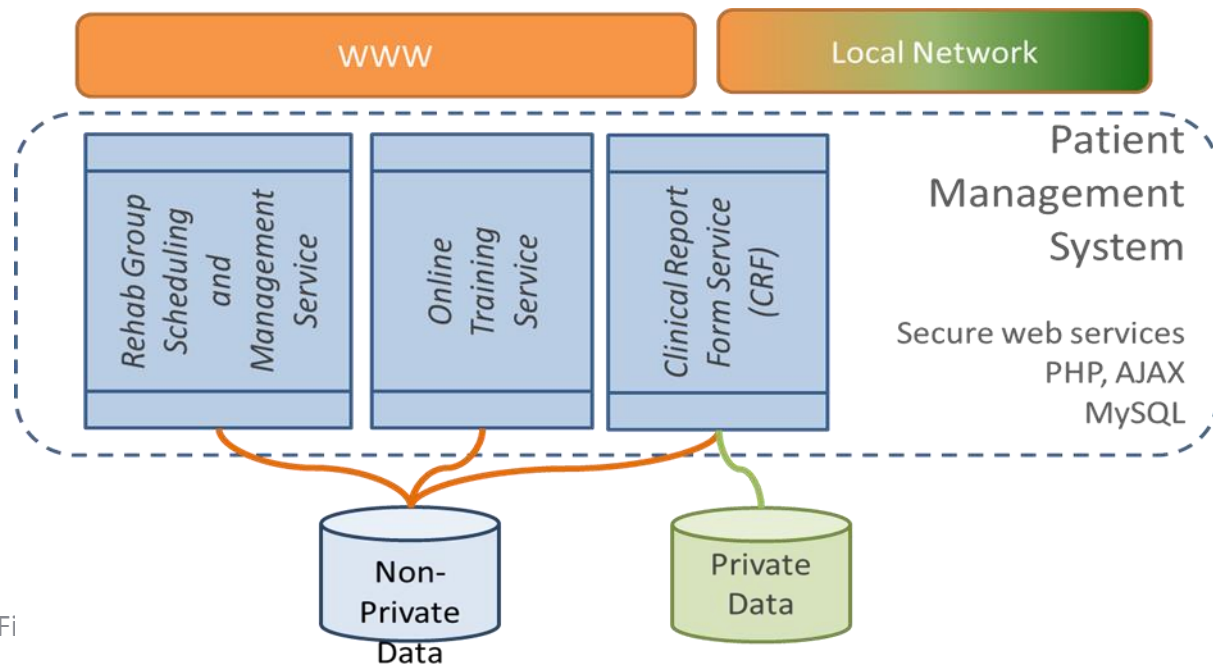

Innovative care programmes in Europe: improving access to healthcare

Example 1: TeleRehabilitation at Nicosia General Hospital (Cyprus)

- The TeleRehabilitation programme is a **home-based rehabilitation service** that applies advanced telemedicine to intensive care unit (ICU) patients after discharge from hospital.
- These people, usually suffering from multiple chronic conditions, need **cardio-respiratory rehabilitation** after discharge. However, very few manage strict adherence to a rehabilitation plan because of several logistic and infrastructural **barriers**.
- The programme improves **adherence to rehabilitation**, the **health status** of people and **reduces readmissions** to the ICU. It reported to be **cost-effective** and leading to high **satisfaction** among both users and health professionals.

Innovative care programmes in Europe: enabling health data management and analysis

Example 2: Strategy for Chronic Care in Valencia Region (Spain)

The Strategy for Chronic Care is a **policy programme** developed in the Valencia Region. It includes:

- constant monitoring by **two nurse case managers** working in primary care and hospitals;
- the implementation, use and sharing by all actors in the care network of **EHRs**;
- an information system for **stratifying the population** according to the morbidity profiles and the corresponding risk;
- an information system to **monitor drug therapies and consumption** by people with polypharmacy.

programme managers

Barriers to eHealth

Micro and meso level

- digital skills of users
- data treatment policy
- design and usability
- business models
- maturity of market

Macro level

- goal-setting process
- legal frameworks
- ICT infrastructures
- evidence of effectiveness and cost-effectiveness
- funding strategies and sustainability plans for implementation
- incentive systems for users
- financial mechanisms

Other observations

- European health systems are (explicitly or implicitly) sustaining ***ageing-in-place***
- Member states need to promote **knowledge exchange** and **shared practices, guidelines and standards** in eHealth sector
- **Infrastructure, service and standard developments** are urgent issues for filling current gaps in implementation

Policy directions

Strategic

- **Common public health objectives:** shared knowledge and decision making
- **Legal and funding framework:** overcome barriers
- **Digital skills of patients, carers and health staff:** training campaigns
- **Large-scale research:** beyond limitations of small-scale projects

Implementation

- **Electronic health records (EHRs):** interoperability and standardisation
- **Personalised medicine services:** towards personal health records (PHRs)
- **Decision support systems (DSSs):** adoption and implementation
- **Population stratification systems:** development and integration
- **mHealth:** new regulations and appropriate funding

POLICY BRIEF

How can eHealth improve care for people with multimorbidity in European countries?

Francesco Barbabella

Take-home message

#eHealth can support
people with **#multimorbidity**,
but its adoption in **#EU** requires more
#innovativethinking and **#resources**
by stakeholders

Innovating care for people with multiple chronic conditions in Europe (ICARE4EU)*

* This presentation arises from the project Innovating care for people with multiple chronic conditions in Europe (ICARE4EU) which has received funding from the European Union, in the framework of the Health Programme.

The content of this presentation represents the views of the authors and it is their sole responsibility; it can in no way be taken to reflect the views of the European Commission and/or the Consumers, Health, Agriculture and Food Executive Agency or any other body of the European Union. The European Commission and/or the Executive Agency do(es) not accept responsibility for any use that may be made of the information it contains.

We wish to thank all the country-experts and the programme managers who participated in the ICARE4EU project.
